To whom it may concern –

We have no hesitation recommending Adrian for any future projects as we feel he is a competent Builder.

We engaged Adrian in 2014 to knock down and rebuild our double garage on a concrete slab, maximising yard space and to fit in with the existing building. Having done a very satisfactory job on this project we called Adrian back to construct an upper story extension and to extensively renovate the existing downstairs building.

This project required the use of many structural columns and steel beams to support the upper story extension. This was completed with minimal disruption to rooms that remained intact.

Adrian completed all complex construction works with ease and on time.

Please feel free to contact me for any additional information should you have any other questions.
